AMENDMENTS TO THE SPECIFICATION

In paragraph [0062], please amend the paragraph as reflected in the following marked-up version of the paragraph:

[0062] Narrow it down menu 264 of search results interface 255 allows the viewer to quickly and efficiently reduce the number of listings in the filterable video program listing 270. The menu 250, the associated selector window 264, and the interactive filter criteria window allow the users to filter through the filtered video program listing 270 to identify video programs of interest. Since the listings are automatically updated based on user selections, users of all levels of sophistication may quickly view the results of the system without confusion. User input can also be received and video programs filtered based on which programs have been previously viewed. As discussed with regard to Figure 3, interface image 116 or an electronic programming guide can include "seen it" button 210 by which viewers indicate that a particular program has been previously viewed. Upon receiving user input specifying a program was previously viewed, data indicating that a particular program was previously viewed can be stored. Filtering may then be performed using the stored data to specify parameters for filtering, such that the individual video programs displayed after filtering do not contain the video programs previously viewed.
